TODAY'S TECHNOLOGICAL BUSINESS CHALLENGES

Manufacturing pain points

Visibility through detailed data is key to competing

Can you manage a global network of partners and suppliers?

Even if your market is local, your supply chains and service providers could well be located all over the world. You need to be able to monitor and balance the interactions between these different factors, and that means having complete real-time visibility into how your business is operating.

Do you know enough about your evolving market?

Thanks to technology, new markets are opening up in more regions than ever before. To compete you're up against local companies who have in-depth market knowledge and lower costs. Being located within the market means they have greater visibility and the agility to react quickly to local needs. Again, visibility through detailed data is key to competing.

Can you reduce risk by ensuring regulatory compliance?

The list of regulatory requirements is huge and constantly growing. You need to understand the many different compliance standards and frameworks, and also prove your compliance via instant, real-time reporting. As Brexit threatens to unhinge existing EU regulation, your business needs the flexibility to keep up with the changes.

Do you have the insights you need to innovate?

Throughout history, manufacturing developments have taken the form of creative new solutions to old problems. But many of today's most successful innovations are meeting market needs in ever more specific ways, honing and improving the old solutions. Deeper market intelligence is of course vital to achieving this objective.

Can you optimise continuously?

As parts are increasingly sourced from different suppliers and products are built in different locales, consistency becomes more essential than ever. You need to assure the quality, safety, and efficacy of your products at all times, yet deliver the flexibility to generate the most from every commercial opportunity. Do you have the insights to do this?

Are you employing technology to stay ahead?

This is no time to be letting legacy systems hold you back. You need to replace what isn't pushing your business forward with modern enterprise management solutions that are easy to use and can support you through the challenges that have developed over the last decade.

Titles drop down from top. Paragraphs appear one after another.
Call out grey block drops down followed quickly by graphic, followed by statement. Call out content to be confirmed.
Simple / clear navigation arrow at edge of page. Purple contents block at bottom - see next page for details.

As Brexit threatens to unhinge existing EU regulation, your business needs the flexibility to keep up with the changes.

Can you manage a global network of partners and suppliers?

Even if your market is local, your partners and suppliers could well be located all over the world. You need to be able to monitor the costs you're incurring and spot opportunities to explore cheaper services. That means having complete real-time visibility into how your organisation is operating.

Thanks to technology, new opportunities for funding are opening up

Are you exploring and maximising the best sources of funding?

Thanks to technology, new opportunities for funding are opening up to you in places you've never explored before. Social media provides more opportunities than ever to gain insights into the motivations and passions of your potential supporters. Visibility through detailed data is the key to reaching out to these new opportunities.

Are you employing technology to ensure you use your resources effectively?

This is no time to be letting legacy systems hold you back. You need to replace what isn't pushing your organisation forward with modern enterprise management solutions that are easy to use and can support you through the technological challenges that have developed over the last decade.

Growth

Don't let legacy systems and expectations stand in the way of the growth of your company. New technology provides the business visibility that enables you to make the right decisions as you streamline your business, expand, and move into new markets. It underpins your strategic vision for the future.

Digital Transformation

Technology is the most essential business enabler of the 21st century. Without it, fledgling tech-enabled businesses from all over the world are better equipped than you to meet the needs of your market. Cloud-based systems allow you to meet the ever-increasing expectation to access answers instantly, from the board room or the beach.

Productivity

Improving the quality of enterprise data can address a number of underlying problems – from contingency-led overstocking to over-reliance on manual labour to cover peak demand. Better insights into actual performance enables you to plan and forecast with confidence.

Flexibility

Instant access to at-a glance performance data gives your business the flexibility to ride out fluctuations in the global business environment, adjust pricing and switch suppliers as needed. It means you can respond to new legislative compliance measures quickly and without risk. A flexible business can respond quickly to the expectations of a flexible market.
